

# APL RIFLE

## HEAVY WEAPON

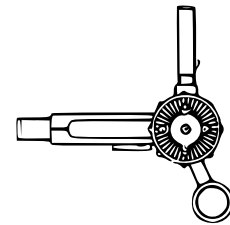

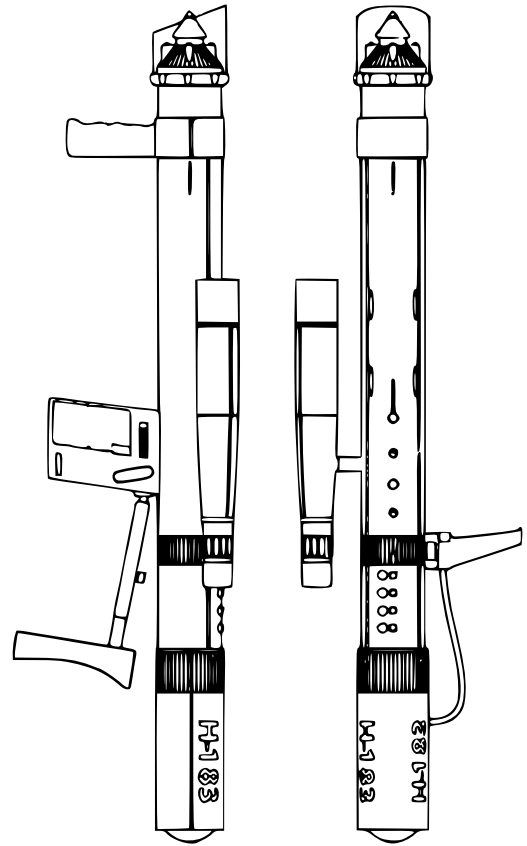

The Armour-Piercing Laser rifle (APL) is a heavy weapon that fires extremely high powered laser beams designed to punch through armour.

They are specifically designed for use against hostile spacecraft by personnel on the Moon's surface.

As the power beam can punch a hole through bulkheads, the APL is not sanctioned to be used within Omega Moonbase itself.

Supplies of the APL are limited, and they can only be assigned to specific teams with specific authority from Command division. They are rarely given to off-world teams.

The weapons are powered by a HI-83 nuclear power cell, which can power the weapon for 10 rounds. The cell must be returned to a nuclear waste facility after use.

### APL Rifle

ROF: 1

Range: Rifle

Recoil: No

Rounds: 10

Damage: 6D Normal Damage

Anti-Vehicular: 2D

Length: 120 cm

Width: 10 cm

Height: 25 cm

Weight: 14 kg
